

MiTrust, the first company in France to be awarded the designation "Data Intermediation Services Provider Recognised in the European Union" by Arcep

PRESS RELEASE • Puteaux, April 14th, 2025

MiTrust, a trusted intermediary for the sharing of personal data, has now been awarded the designation "Data Intermediation Services Provider Recognised in the European Union" by Arcep, making it the first player in France and the second in Europe to obtain this recognition.

The Data Governance Act (DGA): a framework of trust for Europe

Coming into force in June 2022 and applicable from September 2023, the DGA aims to strengthen trust in data sharing, while complying with the principles of GDPR. It institutionalises the role of various trusted entities, including that of Data Intermediation Service Providers (DISPs), key players tasked with facilitating the secure and neutral sharing of data between different parties (individuals, businesses, or organisations), without exploiting the data themselves.

In France, Arcep, in accordance with the SREN law (May 2024), regulates these data intermediaries and awards the designation of "EU-recognised Data Intermediation Service Provider" after consultation with the CNIL and rigorously checking compliance with the requirements set out in Article 12 of the DGA, particularly in terms of security, neutrality, transparency and respect for privacy.

In practical terms, this means that the data intermediary undertakes to protect the data shared via robust security measures, to act as an impartial intermediary without exploiting the data for its own benefit, and to guarantee total transparency in its processes and practices.

MiTrust, a pioneer in data intermediation

Registered already since July 2020 with the ACPR (an administrative authority integrated within the Bank of France) as an Account Information Service Provider, this accreditation enshrines MiTrust's commitment to responsible data sharing, which has been at the heart of its endeavours since its inception.

Thanks to its unique API (Open Finance, Open Admin, Open Identity, etc.), MiTrust enables European citizens to securely share their authentic personal data from reliable sources (banks, insurers, public services, telecom operators, etc.).

With more than 15 million data records already shared across Europe via its service, MiTrust is revolutionising many real-life use cases for businesses and consumers in sectors such as real estate, credit and insurance.

Xavier Drilhon, President of MiTrust, concludes: "We are a resolutely committed player in the field of digital trust. This designation formalises our initial vision and the operational reality of our service. We are delighted to be contributing to one of the strategic objectives of Arcep's Ambition 2030 plan, which is to promote the development of the economy through data and innovation."

About MiTrust

MiTrust is a trusted intermediary for sharing personal and professional data. Its service enables users to share authentic data directly from trusted sources (banks, insurers, public services, telecom operators, etc.) in just a few clicks, in real time, and under their strict control. It is already deployed in three countries (France, Germany and the Netherlands) and in several industries including banking, insurance and real estate. The company is registered with the ACPR (an administrative authority within the Bank of France) as an Account Information Service Provider (AISP) under identification code 17368 (CIB) and has been approved by Arcep as a Data Intermediation Service Provider (DISP) recognised in the EU under code PSID_FR_2024_03.
